

Raychem SMCS

SNOW MELTING CAUTION SIGN INSTALLATION INSTRUCTIONS

DESCRIPTION

The SMCS Snow Melting Caution Sign is an anodized aluminum plaque designed for installation directly in concrete. The SMCS identifies the installation of a Pentair Thermal Building Solutions embedded Snow Melting System. Products for this application include Raychem ElectroMelt and Raychem MI Snow Melting Systems. For assistance with product selection, please contact your Pentair Thermal Building Solutions representative.

The SMCS should be installed in a location where it can be easily seen. Make sure that the plaque is installed flush with the surface to reduce undue wear and to avoid a potential trip hazard. The SMCS incorporates two tapered legs which anchor the sign to the slab after the concrete cures. For concrete ramp applications, the SMCS should be installed in the ramp itself. It should be positioned close to the edge of the ramp, to minimize drive over traffic. It is also recommended to install one SMCS at the top of the ramp and another at the bottom. For asphalt and paver applications, a small concrete area can be created to hold the plaque.
